

Call for Participation**THE DESIGN AND CONSTRUCTION OF VISION
SYSTEMS**

www.bmva.ac.uk/meetings

One Day BMVA symposium in London, UK. 30th March 2005.

Chairs: Adrian Clark (University of Essex)

A vast amount of effort has been, and continues to be, expended in devising vision algorithms. Combining a series of algorithms into a working system is something of a "black art" where much of the effectiveness of the system is down to the experience of the developer. However, this phenomenon suggests that there are underlying principles to designing effective vision systems, though they may be implicit.

This one-day technical meeting is an opportunity for researchers interested in principled approaches to vision system design and construction, including automatic approaches, to present new methods and results and to meet and discuss with others working on the same problems. Please send submissions of no more than 4 A4 pages to

Dr Adrian F Clark
VASE Laboratory
Electronic Systems Engineering
